

Lesson 4 Lab 1

Using Reuseable Site Assets

Files:

Index.html, info-center.html, pagelayout.html, boardmeeting.html, meetings.txt

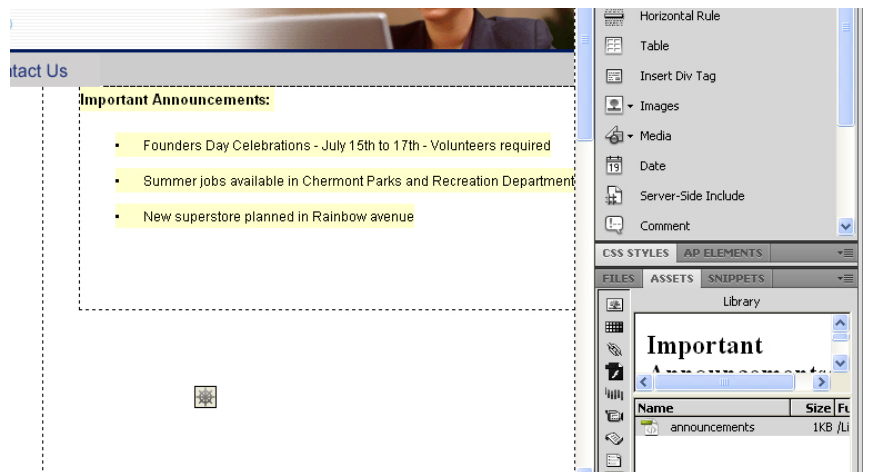

Before You Begin:

Define the Citizens Info (**Site>New Site**) site using data from the **My Documents\Your Folder\Dreamweaver Files\Working with Reuseable Assets\Citizens Info folder**.

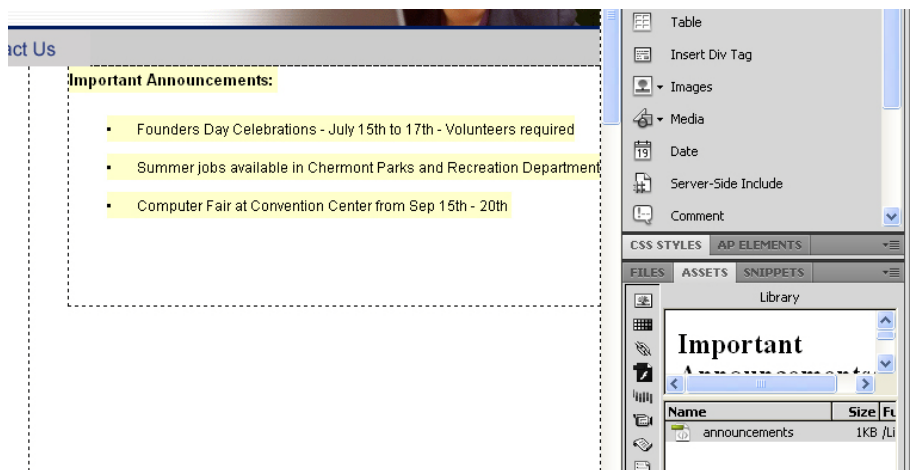

Scenario:

You have worked on web pages for your site. While working on them, you notice that the footer information needs to be changed. Also, you need to update the news headlines that scroll across the pages of your site. You also need to include an additional even in the upcoming events page.

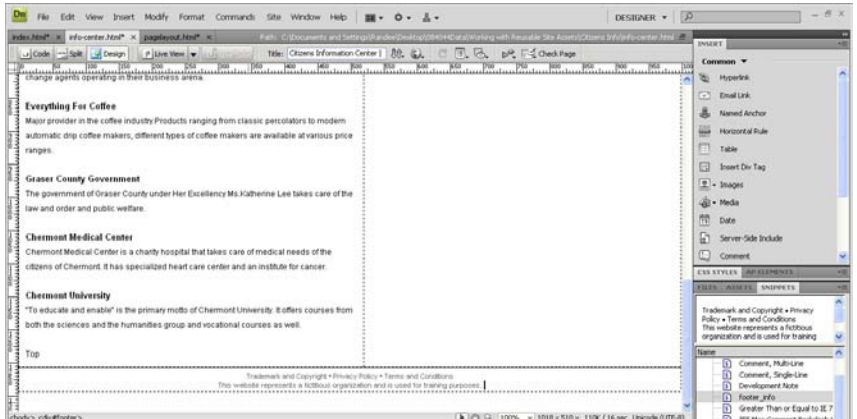

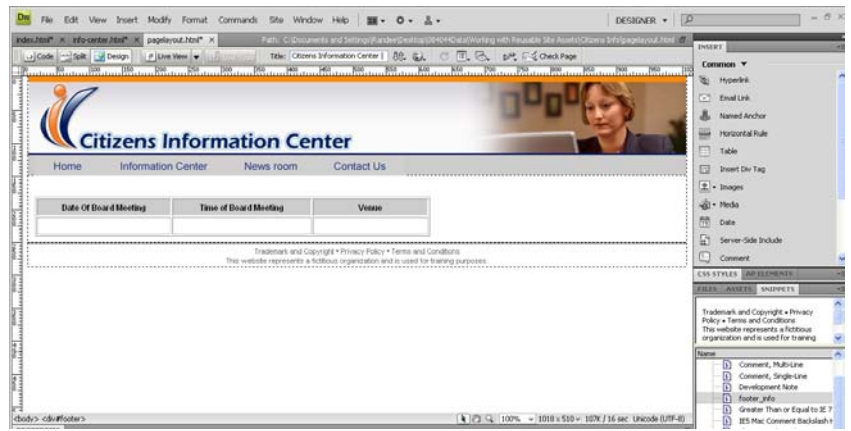

1. Save the important announcements in the index.html file as a library item named **announcements**. (Hint: This is just like #2 in Activity 4-1)
2. Insert the **announcements** library item in the right column of the info-center.html file. (Hint: This is just like #1 in Activity 4-2)

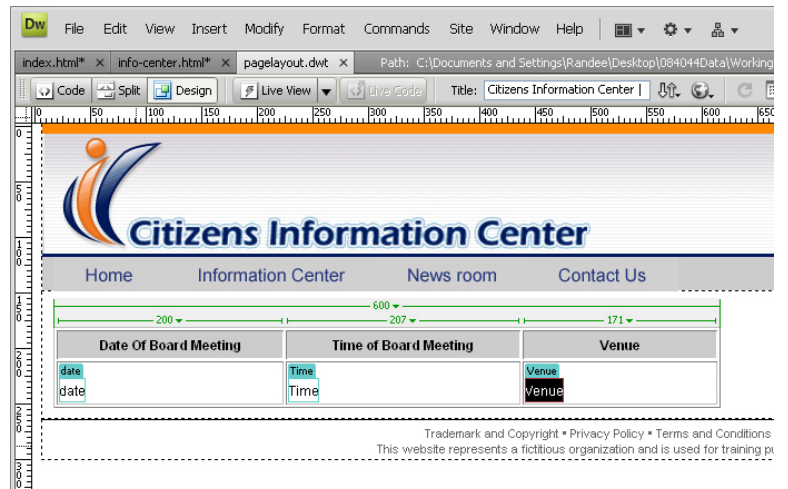

3. In the **announcements** library item, remove the third announcement, add a new announcement that is given in the announcement.txt file, and update the change on all the pages. (Hint: This is just like #1 & #2 in Activity 4-3)

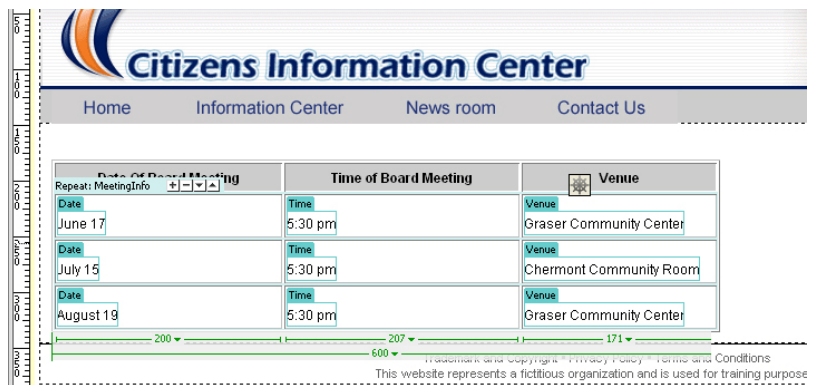

- Save the footer information in the index.html file as a snippet and name it **footerInfo**. (Hint: This is just like #1 in Activity 4-4)
- Insert the footer info snippet in the info-center.html and pagelayout.html files as the footer. (Hint: This is just like #2 in Activity 4-4)

- Save the pagelayout.html file as a template file, with the option to add more rows of data to the table. (Hint: This is just like #1& #2 in Activity 4-5)

- Use the template to create a file named **boardmeetings.html**, and add the information from the meetings.txt file to the table. (Hint: This is just like #3 & #4 in Activity 4-5)

Lesson 4 Lab Rubric

	Points	Score
Save the important announcements in the index.html file as a library item named announcements	2pts	
Insert the announcements library item in the right column of the info-center.html file.	2pts	
In the announcements library item, remove the third announcement, add a new announcement that is given in the announcement.txt file, and update the change on all the pages.	2pts	
Save the footer information in the index.html file as a snippet and name it footerInfo .	2pts	
Insert the footer jnfo snippet in the info-center.html and pagelayout.html files as the footer.	2pts	
Save the pagelayout.html file as a template file, with the option to add more rows of data to the table.	2pts	
Use the template to create a file named boardmeetings.html , and add the information from the meetings.txt file to the table.	2pts	
Total	14pts
