bullets.jpg
cservice.jpg

Before You Begin:

Open indexlab5.html and customer-service5.html in your browser and in notepad

Scenario:

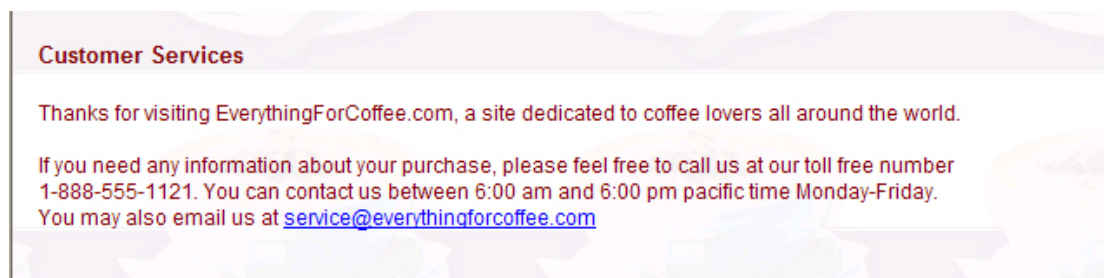

You have created different web pages featuring different products. You would like to provide your visitors an opportunity to visit all these pages. You will therefore create a navigation bar with hypertext links and an image link for the customer service center. You will also provide an email link to enable your visitors to give their feedback about your products. You will also format the links to differentiate between the visited and unvisited links.

1. In indexlab5.html, create hypertext links to the coffee filters, coffee makers, gourmet beans and customer service pages within Everything For Coffee website. In order to enable navigation from the other pages to home page, create a link to the home page as well.

(Hint: `Customer Service` links the words Customer Service to the customer-service5.html page. This is the same thing that you did in Activity 5-1. Look at the directions for activity 5-1 or look at the code from your index5-1.html file)

2. Create an image link from the cservice.jpg image to connect to the customer service page.
(Hint: This is the same thing that you did in Activity 5-2 with the news.jpg. Look at the directions for activity 5-2 or look at the code from your index5-1.html file)
3. In customer-service5.html, create an email link "service@everythingforcoffee.com" on the customer service web page.
(Hint: This is the same thing that you did in Activity 5-3. Look at the directions for activity 5-3 or look at the code from contact-info5.html file)

4. Format the hypertext links. Format the email link in such a way that it looks similar to the text within which the email link is found.
 (Hint: This is the same thing that you did in Activity 5-4. Look at the directions for activity 5-4 or look at the code from contact-info5.html file)
